ONLY +GST

Includes 2 Brake Discs and 1 Pad Set

\*Excludes cost of labour

Alfa Romeo's braking and suspension system is an integral part of your car's design. It ensures that your Alfa Romeo's braking and handling ability is matched perfectly with the engine's performance.

To ensure that, over time, this designed handling and braking system is maintained within factory specifications, components should be regularly checked.

In the event that replacement parts are required, only GENUINE replacement parts should be used as they are manufactured to specific factory tolerances, helping to ensure that your vehicle is returned in the condition it originally left the Alfa Romeo factory.

*\*This offer only applies to Alfa Romeo 147 and 156 4-Cylinder & 2.5 V6 Models (excludes GTA versions). This price includes the supply of 2 brake discs and a set of brake pads for the front or rear of the vehicle. Price does not include labour.*

# BRAKE & SUSPENSION CHECK

## WHAT YOU NEED TO KNOW

### For a 9 Point Safety Check we will inspect the following:

- Check the front brake pads and discs for serviceability.
- Check serviceability of the rear brake shoes and drums or discs and pads depending on the brakes fitted to your car.
- Check condition of all flexible brake hoses and fixed lines (where visually accessible).
- Check the braking cables for their condition and the handbrake operation.
- Check the brake fluid level and the condition. Brake fluid is hygroscopic (attracts moisture) which affects the brake fluid's efficiency. It is recommended that it should be changed every 2 years.
- Check condition of the front shock absorbers for condition.
- Check condition and wear of front suspension arms, bushes and joints.
- Check wheel bearings for excess movement and play.

### Labour Times

All 147 and 156 – 4 Cylinder & 2.5 V6 Models (excludes GTA versions)	
9 Point Safety Check	20 mins
